

RECOMMENDATION

To whom it may concern

Date: May 31, 2020

PEG B TECHNOLOGY-FZE used two services from Atlant Security - the "Information Security Assessment" and the "CISO as a Service".

We wanted to establish where we stand when it comes to cybersecurity controls, because as a software development company we have to create secure code, deploy it safely and create secure products, running on secure infrastructure.

Atlant Security, represented by Alexander Sverdlov who performed both services for us, exceeded our expectations in the process of the assessment and in the report we received, which acted as our Information Security Program Plan. This Information Security Program was then executed in the form of the CISO as a Service.

As a Virtual CISO, Alexander displayed the organization, confidence, and professionalism necessary to fulfill this leadership role. He maintained the staff team to be always punctual and hard-working.

Alexander proved very good in negotiating with suppliers and managed to achieve the best technology solution for the company in a cost effective way.

The volume of work that we get is demanding, but Alexander always delivered his work on schedule and was capable of planning his workflow to suit our company needs. In my experience not many people have been able to hold up under pressure to consistently deliver quality results on time.

The whole team enjoyed working with Alexander towards achieving our security goals and the company's management is glad that Atlant Security was selected to assist in this endeavor. We highly recommend their services to anyone who is serious about achieving their cybersecurity goals.

Sincerely

Nedyalka Yolovska
Managing Director
